

# Computop Close-by\*

## A new approach to contactless

### The benefits at a glance:

No card terminal required

No app or registration required on the customer side

Supported by any NFC-enabled smartphone

Choice of over 40 payment methods

Easy setup of the NFC transmitters and payment pages

Individually customised payment pages

Payment pages are hosted on highly secure Computop servers

With Apple Pay, Google Pay and Click to Pay also suitable for cash register integration

### Smartphone payments at the point of sale – without app and terminal

The contactless payment solution Computop Close-by\* works with any NFC-enabled smartphone without an additional app and also makes online payment methods available at the point of sale – highly secure, highly flexible!

Near Field Communication (NFC) has long been established for payments via plastic card or digital wallet. The disadvantage of previous solutions: They lock consumers into certain payment methods and sometimes require costly terminal hardware and time-consuming set-up for the merchant.

Computop Close-by\* requires neither POS terminals nor special payment apps. Thanks to Computop's patented and inexpensive NFC technology, any standard mobile phone can be used for payment.

The contactless device receives a payment link that takes the buyer to a payment page in the internet browser that can be customised by the merchant. There, the buyer selects his or her preferred payment method and completes the purchase.

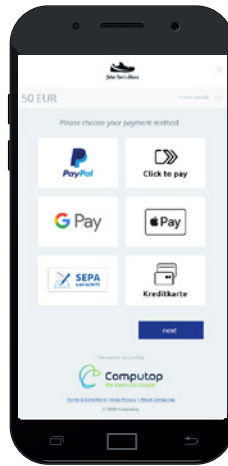

## How Computop Close-by\* works

Static payment link on an NFC tag or label

Fixed payment amount or individual amount entry by buyer

Ideal for donations or sale of individual products

Example payment page

Dynamic payment link generated by POS system

Payment amount and shopping cart information according to the selected products

Ideal for vending machine sales or direct cash register integration

## Highly flexible: Computop Close-by\* scales with your business needs

### Automats

More payment options at charging stations, vending and ticket machines, in car parks, etc.

### Direct purchases

on the shop floor without queuing at the checkout, sales as part of pop-up sales promotions.

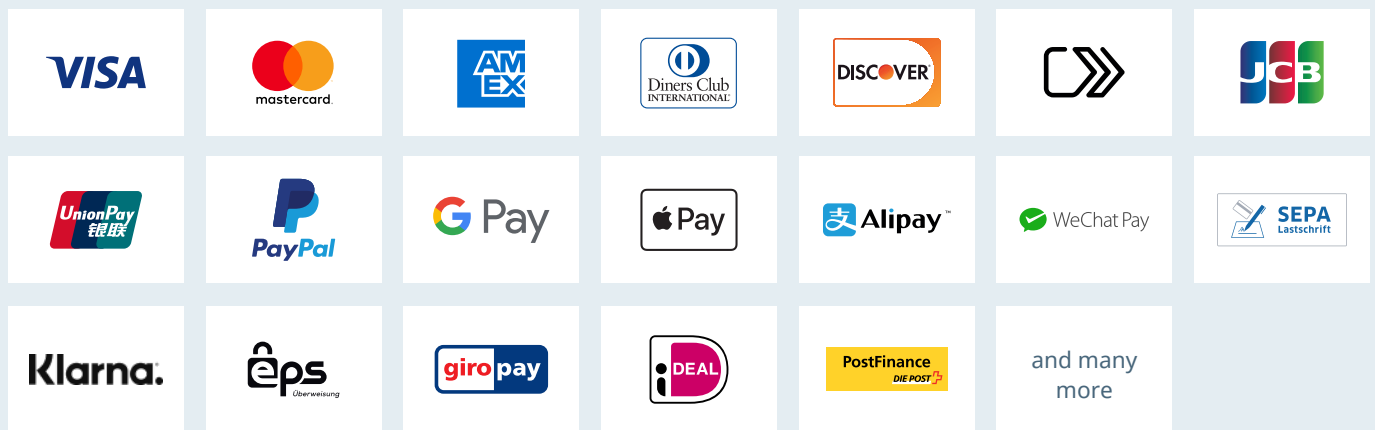

### Donations

Easy acceptance of donations at events or social institutions.

### Cash register integration

Additional payment methods to supplement card and cash payments.

\* Product name may be subject to change

Computop offers its customers worldwide local and innovative omnichannel solutions for payment transactions and fraud prevention in e-commerce, at the POS and on mobile devices. With the Computop Paygate payment platform, merchants and service providers are flexible and can freely choose which of the more than 350 payment methods should be used in which country. With locations in Germany, CN, the UK and the USA, Computop has been serving large international companies such as Bigpoint, C&A, Fossil, the Otto Group, Sixt and Swarovski for more than 20 years and processes payment transactions worth 35 billion US dollars annually.
