

Computop PhonePOS

Turn your Android smartphones,
tablets, or enterprise devices into
professional payment terminals!

Computop
the payment people

Our solution at a glance:

Acceptance of contactless card payments using an Android-based device (smartphone, tablet or handheld)

Supports PIN functionality for payments exceeding €50 (Germany)

Supports the girocard

Complies with the highest security standards: Certified according to PCI and DK TA 7.2

Available as a standalone version or via the mAPI cash register interface

Issuing of customer receipts via QR code or e-mail

Discover the new, versatile card reader alternative

With Computop PhonePOS, you can accept contactless card payments at the point of sale conveniently and quickly using an Android-based device.

This new, multi-purpose technology simplifies your POS hardware setup and saves your staff from handling multiple devices.

Your customers also benefit from Computop PhonePOS. Let them pay for goods or services on the spot in direct contact with your service staff, avoiding waiting times at the checkout.

Our solution enables contactless, NFC-based POS acceptance of the following card brands and e-wallets:

The VISA logo in its characteristic blue and white color scheme.The Google Pay logo, featuring the multi-colored "G" and the word "Pay" in a black rounded rectangle.

Which devices can be used for Computop PhonePOS?

Commercially available, Android-based smartphones and tablets (COTS devices)

The application is available for download in the Google App Store. A newer generation Android device (Android version 11 or higher) is required.* The device must meet the continuous minimum requirements and must not be rooted.

Enterprise handhelds (Professional devices)

The use of Android-based devices developed for professional purposes (e.g. for logistics or catering) is generally possible. However, feasibility must always be assessed individually and requires a customized project offer.

* As of February 2024

Who can use Computop PhonePOS?

Consulting-intensive retail

Let your customers pay immediately after the consultation on the shop floor, with no need to queue at the checkout.

Examples: Consumer electronics, home and living

Mobile services

Save your field staff from having to carry extensive hardware and let them accept card payments via their mobile devices instead.

Examples: Customer services (installation, maintenance, repair), logistics (parcel services, trucking companies)

Flexible, location-independent sales

Enable the flexible sale of goods at changing, non-permanent points of sale.

Examples: Stadiums and concert halls, festivals, gastronomy

White label solution

Additional alternative to POS terminals

If you are a POS payment provider, why don't offer your merchants an attractive alternative to conventional POS setups? We will provide PhonePOS to you as a white label solution, too.

Included PIN functionality for high purchase amounts

For payments exceeding €50, shoppers enter their card PIN directly on the PhonePOS device in a secure environment. Payments under €50 do not require a PIN to be entered.

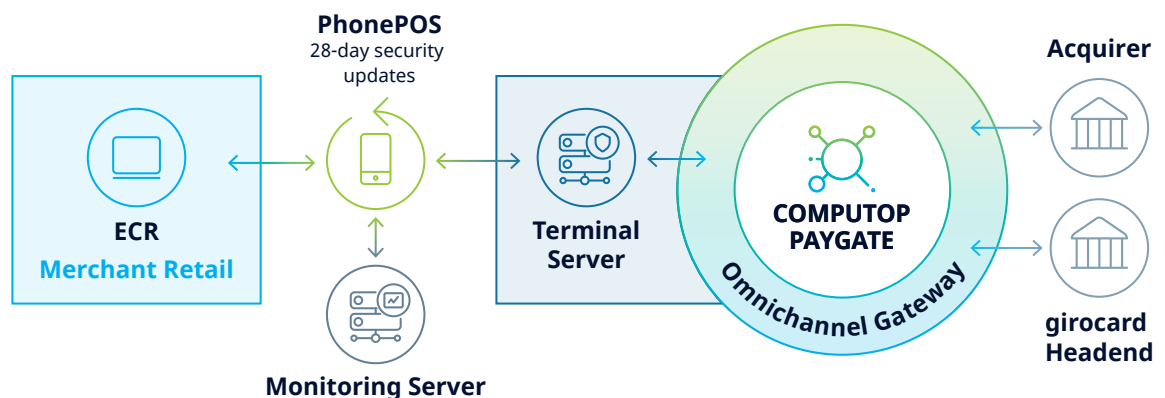

The amount of €50 refers to the NoCVM limit applicable in Germany.* If the limit is exceeded, the cardholder must be additionally authenticated.

*NoCVM limits are country-specific and may vary.

Security

Computop PhonePOS is subject to the strict approval requirements of the German Banking Industry (DK) and Payment Card Industry (PCI). The security architecture of our solution features a dedicated monitoring

server, protecting the application during operation and checking every transaction in the background. Automated security updates every four weeks guarantee absolute software integrity at all times.
